Web & Sheet Cleaning Systems

Multiple production processes of paper, film, and foil materials create particles that can contaminate the web. Contact and separation of the web material with the machine rollers generates static electricity that results in an electrostatic adhesion, bonding contaminants to the surface of the web. The faster the web operates, the more complicated this problem becomes. Contaminated surfaces cause defects, which results in quality problems, costly rejects, and ultimately dissatisfied customers.

Benefits

- Reduces product rejects
- Improves overall product quality
- Increases productivity
- Minimizes maintenance and downtime for cleaning
- Improved customer satisfaction

Simco-Ion offers a variety of web & sheet cleaning systems. The cleaner that is right for you depends on how clean you need your surface to be. Most systems are configured with static bars that neutralize static charges and prevent retraction of contaminants to the web surface.

The Neutro-Vac® Web Cleaning System

Neutro-Vac Systems combine the power of a compressed air blast, static elimination, brushes and a high exhaust head to agitate the web, remove the static bond and evacuate surface particulate down to 20 microns in size. The Neutro-Vac systems are ideal for installation over unsupported webs from 3" to 300" wide. No adjustment is required to accommodate a change in web width due to the characteristics of the Neutro-Vac head design. These systems are also designed with low maintenance in mind.

Features

- One-sided or top and bottom web cleaning
- Contact, non-contact and hazardous location configurations
- HEPA after-filter available

Neutro-Vac systems have been installed on many machines including:

- Marquip Systems
- United Die Cutter
- Ward Die Cutter
- Harper Die Cutter
- Slitting Machines

Ion-O-Vac® Web & Sheet Cleaning Systems

The Ion-O-Vac line of sheet and web cleaners is designed to remove particulate down to 20 microns in size.

Using a combination of high velocity air speed and static elimination, the Ion-O-Vac heads are mounted where material has more than 30 degrees of surface contact with a roller or cylinder. This maximizes the cleaning effect of the high pressure vacuum.

Features

- Double surface cleaning available for web presses
- Canister collector with cartridge filter
- Pre-filter and motor starter
- Contact and non-contact configurations

Ion-O-Vac

The Mark I systems include a high velocity dust collector and custom designed vacuum head with cleaning brushes and static bar (not included on select models). Designs for many presses as well as custom engineering are available to manufacture a head to accommodate modifications to your press.

The Mark I sheet cleaner is used extensively in the printing industry on many presses including:

- Heidelberg
- Komori
- Man Roland
- Mitsubishi
- Mark Andy
- Nilpeter
- Comco
- Propheteer
